

PRODUCT DESCRIPTION

PAGING INTERFACE OPTION ESC2020

Model # PGINT
Part # 01-1485907-00

GENERAL-

Whelen's High Power Voice and Siren systems may be equipped with an optional module that allows the user to broadcast siren tone, digital voice messages or public address through existing in-plant public address systems.

The audio output of the Paging Interface Module is a 600 ohm, transformer coupled balanced signal. This output interfaces with most industry standard paging systems. A level adjustment

potentiometer allows the user to set the siren tone audio output to match the digital voice or PA audio output of the siren. The matched **level is 0 db to -10db**.

The Paging Interface Module also has an output relay that makes a 1 amp rated, contact closure whenever the siren audio is active. This is typically used to perform the in-plant PA microphone "Push-To-Talk" function.
